

# FORECASTING WEATHER

## Whirling Wind Vane

Find out which way the wind is blowing!

### MATERIALS:

construction paper	pencil with eraser
scissors	marker
plastic tub with lid	compass
stones	plastic straw
adhesive-backed craft foam	straight pin

- 1** Cut a triangle and a rectangle out of construction paper. The rectangle should be larger than the triangle.
- 2** Cut a slit in each end of the straw. Slide the shapes into the slits. The rectangle is the tail. The triangle is the arrow.
- 3** Fill the plastic tub halfway with stones. Trace the lid on craft foam. Cut out the circle. Put the lid on the tub. Stick the circle to the lid. Push the pencil through the center of the lid.
- 4** Cut four small triangles out of craft foam. Label them N, S, E, and W. Peel the adhesive off half of each triangle. Stick the triangles to the top of the lid. Make sure they are in the same order as on the compass.
- 5** Stick the pin through the center of the straw, then stick the pin into the pencil's eraser.
- 6** Bring your wind vane outside. Use the compass to find north. Set the wind vane in an open area with the N triangle pointing north.
